Enhancing Education and Safety

A photograph of a large, multi-story school building with a prominent central tower. The building has a red-tiled roof and many windows. An American flag is flying on a tall pole in the foreground. The sky is blue with white clouds.

The Comprehensive Solution for School Communications

***Classroom Voice & Media Amplification
Public Address • Emergency Notification
Intercom • Bell Schedule • Clock Synchronization***

Amplified Learning™ Technology

Teacher's voice and classroom media are reinforced to improve intelligibility

Accelerates learning and relieves student stress by increasing the ability to understand presented material

Reduces teacher's fatigue and voice strain by overcoming poor classroom acoustics and external distractions

Promotes student motivation and achievement through enhanced clarity of instruction and the spoken word

Intercom • Public Address • Emergency Notification

Single button call-in identifies call priority and initiates full duplex communication promoting efficient call management

Audible and visual messages can be broadcast individually or simultaneously in multiple languages further facilitating effectiveness and school operation

Text messages can be sent to designated computers on the school network allowing confidential distribution

Automated monitoring and diagnostics send daily status emails assuring system health and proper functionality

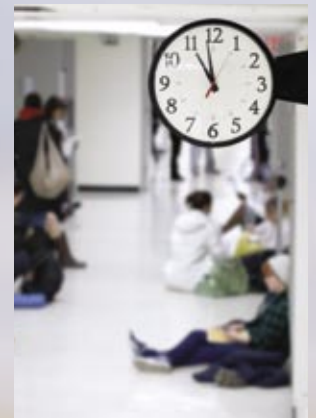

Bell & Event Scheduling

Configure and store up to 64 unique schedules providing flexibility to meet the variety of school schedules

Deploy one to three active schedules to run at the same time to address various school populations

Utilize tone, voice, or music .wav files for class change signals and scheduled announcements to improve understanding and promote school spirit

Synchronize all clocks enabling time and bell consistency eliminating confusion among students and faculty

Does your communications system...

Enrich the learning environment?

Simplify everyday communication?

Improve school operation and safety?

The CampusCommunicator™ System addresses the concerns of **parents, faculty, and administrators** for **effective** communication in schools.

LANcom[®]
Technologies

Parents trust **you** to educate
their children and keep them safe.

The CampusCommunicator™ system is more than just a school intercom or public address system. It is an educational tool that accelerates student achievement. No other school communication system combines the functions of classroom amplification with classroom intercom and emergency notification.

Only the CampusCommunicator™ system provides a feature rich solution for campus wide communication with classroom voice and media amplification, full duplex, high quality intercom, scheduled message playback in multiple languages, multiple format visual messaging, ambient noise sensing and extensive system monitoring.

The classroom sound reinforcement module (SRM) incorporates TeachLogic infrared receivers for communication with RF microphones; local AV inputs for connection to projectors and other classroom media. Microphones and other media are automatically overridden when an intercom call, page, or emergency message is directed to the classroom.

Configuration of schedules, zones, messages, and bell tones is accomplished via CampusCommunicator™ software. The intuitive, web-based software interface provides multiple levels of password protected access for designated system users. The system is interconnected with the structured cabling plant using CAT 5 and standard fiber optic cable, allowing both long term reliability as well as cost savings for schools where infrastructures are already installed.
